RESEARCH INTEREST

As a director of TIID, I guided and supervised the analytical work on areas covered by the Division's programme in areas of trade, investment and technology and innovation. For example, I have led research work on trade policy and trade-related issues incorporated in, inter alia, the Asia-Pacific Trade and Investment Report from 2009 till 2021. All research was geared towards creating applicable and adequate evidence for improved trade, investment and innovation policymaking in a context of sustainable development. This spans from mapping and monitoring of preferential trading arrangements in Asia-Pacific region (including further development of analytically-friendly database known as the Asia-Pacific Trade and Investment Agreements Database, APTIAD); providing a measurement of impact of alternative policy options or policy scenarios, and developing new analytical tools. Personally, I have been paying a special attention to the role of the services trade and in particular digitally enabled services in development; organization of regional and GVCs; evolution of regionalism under the rules of the multilateral trading system; sustainable trade and investment, regulatory issues for digital economy; frontier technologies and inclusive future of work, and enabling a bigger role of women in influencing evidence-based policymaking in trade, investment and innovation.
